# NEVONEX

**Ready for the future:**  
NEVONEX – the **comprehensive**  
**solution** for your digital agriculture

Powered by

## NEVONEX – the comprehensive solution for your digital agriculture

Connect the dots and upgrade independently of specific manufacturers: Ensure that your business is equipped for the agriculture of the future. For the first time, NEVONEX brings together Digital Services from different providers and gives you access to these services in one place. As a result you will only need one Retrofit Kit to use these different services with your machine without any problems.

From optimization of soil cultivation, sowing, fertilizing and crop protection, to seamless transfer of application maps and automated documentation: thanks to a growing number of specialist partners combined with the reliability of Bosch, you gain access to agronomic services from well-known providers, while also being able to rely on a seamless interplay of all components.

NEVONEX makes upgrading your machine easy by requiring just one Retrofit Kit. Tedious manual work, such as transferring data or maps using USB flash drives, is also a thing of the past. In the event of any technical questions, a central NEVONEX service contact is on hand to help you.

### NEVONEX – one comprehensive solution:

- ▶ A single hardware unit with cross-manufacturer compatibility
- ▶ A growing portfolio of Digital Services from a wide range of providers
- ▶ A reliable infrastructure with a central service contact

## To take your first steps into the future, you will need only two things

You can select a variety of Digital Services from our partners based on your individual needs. Digital Services are available across the entire value chain.

You can order the NEVONEX Retrofit Kit from one of our installation providers to upgrade your existing machinery.

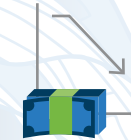

After selecting your Digital Services, purchasing and installing the hardware the Digital Services are ready for download via the MyNEVONEX web portal. The NEVONEX Cockpit app runs on a standard tablet and acts as user interface in-cab. Additional Digital Services can be added at any time. MyNEVONEX, the NEVONEX Cockpit app and the first Digital Services go live in March 2022.

## Advantages you can count on

Benefit from future-proof technology, simplified processes, and expert knowledge all in one place, enabling you to:

### Reduce costs –

e.g., by increasing precision in seed placement and the application of fertilizers and crop protection

### Achieve bigger yields –

e.g., by being better able to manage the crop based on current conditions in the field, for example using live sensor data

### Save time and improve your quality of life –

e.g., by automating work processes and directly transferring data to a farm management information system (FMIS)
